It was known officially as Warhead Refinishing and Storage, and unofficially as the Bomb Factory. Nobody worked there. Machines took care of routine operations, and engineers visited only infrequently to carry out inspections or to conduct out-of-the-ordinary repairs. Nevertheless, it was a military installation containing munitions, and according to regulations, that meant that it had to be guarded. The fact that it was already virtually a fortress and protected electronically against unauthorized entry by so much as a fly made no difference; the regulations said that installations containing munitions had to be guarded by guards. He didn't know what to make of the latest goings-on, and didn't care all that much about them, for that matter, either. It was all the same to him. Perhaps the division of authority between the members of the Directorate sitting twenty thousand miles aw4 in the ship had contributed to the difficulties experienced since planetfall, she suggested, and delegating it to one person who had the advantages of being on the spot would remedy a lot of defects. Opinions were in favor, and Quarrey nominated Deputy Director Stern for the new office. Stern, however, declined on the grounds that a large part of the job would involve policymaking connected with Terran-Chironian relationships, and since a Liaison Director existed to whom that responsibility was already entrusted, the sensible way to avoid possible conflicts was to unify the two functions, lie therefore nominated Howard Kalens; Quarrey seconded, and the vote was carried by a wide margin..scored six or eight points higher. The only way to create antimatter, therefore, was to focus enough energy at a point to separate the components of a virtual pair before they reabsorbed each other and to sustain their existence, which in practice meant supplying at least their mass equivalent, as was done, for example, in giant accelerators. This was the reason for the widespread skepticism that any net energy gain could ever be realized from annihilating the antimatter later. At best it was felt to be an elaborate storage battery, and not a very efficient one at that; the power poured into the accelerator would be better applied directly to whatever the antimatter was wanted for..Speed 300 miles per second; distance to destination, 493 million miles.
